

Drafting an emerging picture

Name: Cameron Wilson
Community & UN SDG(s): 3,12
Date: October 17th, 2023

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes	Current technology does not cover meetings very well, but it seems the desire of the community is not to create a tool for this. They cover individual goals, but I don't feel any of them have the community aspect in a way that would benefit mass adoption for TOPS.
<input checked="" type="checkbox"/> Are you almost there? <input type="checkbox"/> Are there big gaps?	Tools are close, as what they need is currently being achieved with a relatively high success rate.
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	The range of skills is wide and diverse, some could cause conflict depending on the execution of the application.
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	Things are very disconnected; tools are limited
Where are there big gaps	Meetings and content that happens in person is not connected to the tracking people do.
Balancing the polarities (Current state)	
How is the configuration balanced with respect to each polarity?	

[illegible]
